

Special Mountain Studies Seminar

Mountains as Natural Experiments in Biodiversity

How is vertebrate diversity distributed on mountains across the globe? What do those patterns tell us about global drivers of biodiversity, including theories tied to current climate, spatial patterns, biotic predictions, and historical processes? This seminar will discuss research on small mammals, bats, birds, and herpetofauna from mountains in places like Costa Rica and Colorado.

By Dr. Christy McCain

Assistant Professor, Department of Ecology & Evolutionary Biology,
University of Colorado at Boulder

Friday, April 3, 2 pm

Noble Hall, Room 125

Fort Lewis College, Durango, Colorado

*Those wishing to meet with Dr. McCain in the morning or during lunch should contact Koren Nydick at Nydick_k@fortlewis.edu or call (970) 247-7071
